

Array.zip & Array.product

(feature #6499)

```
Array.zip([:x, :y], (1..2)) # => enumerator  
Array.zip([:x, :y], (1..2)).to_a # => [[:x, 1], [:y, 2]]
```

Same thing with Array.product

Why?

- enumerator useful with big results (especially for Array.product)
- *Array.zip(*arrays) much better than:
 arrays[0].zip(*arrays[1..-1])
- ... especially if arrays == []
- ... or if arrays[0] == (1..2)
