

8631: Allow ERB#result to accept a hash

Instead of the common approach of using an `openstruct` to convert a hash to a binding:

```
ERB.new(template).result(my_local: 'value')
```

Currently one must do something like:

```
ERB.new(template).result OpenStruct.  
new(my_local: 'value').instance_eval{ binding }
```
