#6670: **str.chars.last** should be possible

```
"foo".chars.last        #=> NoMethodError
"foo".chars.to_a.last   #=> "o"
```

I feel it's hard to explain why "to_a" is needed here for Ruby beginners.

Easiest impl: make String#chars to return Array (and keep #each_char as is)
