ruby -v:	ruby 2.1.2p95 (2014-05-08 revision 45877) [x86_64-darwin11.0]	Backport: 2.0.0: DONTNEED, 2.1: DONTNEED

Description

I encountered an issues where I was using RVM to install ruby 2.1.3 and it kept hanging at the compilation stage. I thought this was due to a compiler issues and set the CC flag to gcc and retried the install: it still failed and the compilation crashed. See commands trail and attached make log.

```
trinitys@62: ~ $ CC=/usr/bin/gcc rvm install ruby 2.1.3
ruby-2.1.3 - #removing src/ruby-2.1.3..
Searching for binary rubies, this might take some time.
No binary rubies available for: osx/10.7/i386/ruby-2.1.3.
Continuing with compilation. Please read 'rvm help mount' to get more information on binary rubies

Checking requirements for osx.
Certificates in '/usr/local/etc/openssl/cert.pem' are already up to date.
Requirements installation successful.
Warning: found user selected compiler '/usr/bin/gcc', this will suppress RVM auto detection mechanisms.

Hi, an you reproduce the problem without RVM?
(e.g. "./configure && make && make install")

If not, please see <http://rvm.io/> for help/support options.
