Ruby master - Bug #10293

splatting an empty hash in a method invocation sends an argument to the method (should send nothing)

09/24/2014 11:57 PM - rits (First Last)

Status: Closed
Priority: Normal
Assignee: nobu (Nobuyoshi Nakada)
Target version:

Description

irb(main):001:0> def foo; end; foo **{}
ArgumentError: wrong number of arguments (1 for 0)

note that splatting an empty array results in no arguments

this behavior is particularly problematic with send (dispatching to different methods)

send method_name, *possibly_empty_arg_list, **possibly_empty_keyarg_hash

one should not have to do

if possibly_empty_keyarg_hash.empty?
  receiver.send method_name, *possibly_empty_arg_list
else
  receiver.send method_name, *possibly_empty_arg_list, **possibly_empty_keyarg_hash
end

or

possibly_empty_arg_list << possibly_empty_keyarg_hash unless possibly_empty_keyarg_hash.empty?
  receiver.send method_name, *possibly_empty_arg_list

History

#1 - 09/25/2014 01:44 AM - rits (First Last)
https://bugs.ruby-lang.org/issues/9291 is somewhat related
foo(**nil) should not raise since foo(*nil) does not and it's the more useful behavior

With the acceptance of #14183, double splatting an empty hash no longer sends an empty positional hash to the method.
