Thank you for your request.
I confirm #10511 was degradation introduced by backporting r46419 (at r47009).
r48596 and r48765 should be backported, but they are changes at somewhat delicate part of MRI. I'll handle this after asking ko1 and nobu about this changesets.
Anyway, thanks again!

I asked ko1 about this issue. The changesets about #10511 introduce binary incompatibility. They change memory layout of rb_thread_t. I'll investigate more details to find the way to reorder structure members to reduce binary incompatibility.
