

Ruby master - Bug #1066

Frequent failure: test_io.rb test 2 on OS X 10.5.6

01/28/2009 09:48 PM - mikestok (Mike Stok)

Status: Rejected	
Priority: Normal	
Assignee: nobu (Nobuyoshi Nakada)	
Target version: 2.0.0	
ruby -v: -	Backport:
Description	
<pre>=begin Many times when I build the ruby trunk downloaded from http://svn.ruby-lang.org/repos/ruby/trunk the test_io.rb output is: test_io.rb .F..... and at the end of the tests there is this failure message: #223 test_io.rb:11:in `': begin require "io/nonblock" r, w = IO.pipe w.nonblock = true w.write_nonblock("a" * 100000) w.nonblock = false t1 = Thread.new { w.write("b" * 4096) } t2 = Thread.new { w.write("c" * 4096) } sleep 0.5 r.sysread(4096).length sleep 0.5 r.sysread(4096).length t1.join t2.join rescue LoadError end #=> not finished in 10 seconds [ruby-dev:32566] FAIL 1/928 tests failed make: *** [btest-ruby] Error 1 Maybe one time in twenty it succeeds, but I have not tried to check whether this is revision dependent. The latest revision I tested and which failed the test was 21852 =end</pre>

I couldn't find a problem in the test case.
So I think this is a Ruby bug.

However I cannot reproduce the problem on my GNU/Linux environment.
So assignment cleared.

I got this also. I'm on Mac 10.5.6 running ruby 1.9.1p0 (2009-01-30 revision 21907) [i386-darwin9.6.0]

I don't understand what this test is trying to test. It does not make any sense to me. You fill the pipe with a's. So, the pipe is full. Then you try to write 4096 b's and 4096 c's. That is in blocking mode so it is going to block until there is space. You read only 8192 of space but the pipe may not be back enabled until you read more than that. I would read one byte at a time. Ignore the a's and count the b's and c's until it goes empty, then see if you got 4096 b's and c's.

```
assert_finish 10, %q{
begin
require "io/nonblock"
r, w = IO.pipe
w.nonblock = true
w.write_nonblock("a" * 100000)
w.nonblock = false
t1 = Thread.new { w.write("b" * 4096) }
t2 = Thread.new { w.write("c" * 4096) }
b_count = 0
c_count = 0
while c = r.sysread(1)
b_count += 1 if c == "b"
c_count += 1 if c == "c"
break if b_count == 4096 && c_count == 4096
end
t1.join
t2.join
rescue LoadError
end
}, ['ruby-dev:32566']
```

=end

This failure still happens with ruby 1.9.2dev (2009-06-19 trunk 23741) [i386-darwin9.7.0] on OS X 10.5.7

ratdog:~ mike\$ uname -a

=end

#11 - 06/26/2011 04:08 PM - kosaki (Motohiro KOSAKI)

At least, My Mac OS X 10.6.7 can't reproduce this issue.

#12 - 08/08/2011 09:08 PM - kosaki (Motohiro KOSAKI)

- Status changed from Feedback to Rejected

I close this as Rejected since no feedback provided.

Please upgrade your OS.
