

Ruby master - Bug #12186

/snapshot/lib/rubygems/installer.rb:233

03/17/2016 09:03 AM - sawa (Tsuyoshi Sawada)

Status:	Third Party's Issue	
Priority:	Normal	
Assignee:		
Target version:		
ruby -v:	Nightly snapshot (2016-3-13 03:01)	Backport: 2.1: UNKNOWN, 2.2: UNKNOWN, 2.3: UNKNOWN

Description

I downloaded the nightly snapshot (<https://cache.ruby-lang.org/pub/ruby/snapshot.tar.gz>), and did:

```
./configure
make
sudo make install
```

and got:

```
.../snapshot/lib/rubygems/installer.rb:233:in `check_executable_overwrite': no implicit conversion of nil into String (TypeError)
```

The offending line installer.rb:233 looks like this,

```
question << existing
```

and the values seem to be:

```
question # => "rake's executable \"rake\" conflicts with "
existing # => nil
```

Is this a bug, or is there something wrong with my environment?

Also, I am looking forward for Ruby 2.3.1. Is there a place where the schedule for the release of teeny versions are announced? Or is it is not announced until release?

History

#1 - 03/17/2016 12:44 PM - nobu (Nobuyoshi Nakada)

- Status changed from Open to Third Party's Issue

It seems the case a target file to be overwritten was not generated by RubyGems, and the previous line seems to be if ruby_executable and existing.

#2 - 03/17/2016 11:29 PM - usa (Usaku NAKAMURA)

Also, I am looking forward for Ruby 2.3.1. Is there a place where the schedule for the release of teeny versions are announced? Or is it is not announced until release?

The place may be www.ruby-lang.org and/or ruby-talk ML. (you can find a sample on the top of www.ruby-lang.org now :-P)
But, in general, we (stable branch maintainers) can not promise the date of next release, because we can not know the timing when a critical security problem will be reported.
