Ruby master - Bug #12274
accessing to instance variable should be fast.
04/12/2016 03:50 PM - tarui (Masaya Tarui)

**Description**
Currently, accessing to instance variable is quite slower than accessing to local variable. I think accessing to instance variable is basic operation and it should be fast, so tried to improve.

patch: [https://github.com/tarui/ruby/commit/dd993da80c7ad84340689137bf8b030873595cae](https://github.com/tarui/ruby/commit/dd993da80c7ad84340689137bf8b030873595cae)

It increases in the maintenance cost a little, but can I commit it?

```
$ ./ruby --disable-gems ../../../optcarrot/bin/optcarrot --benchmark ../../../optcarrot/examples/Lan_Master.nes
ruby 2.4.0dev (2016-04-12 trunk 54553) [x86_64-linux]
fps: 13.664029283085743
checksum: 59662
```

        val = Qnil;
    }
}
Tarui-san suggested another way to optimize and this is my version of that technique (with some refactoring).

The diff is hard to read, would you have a commit on GitHub or a patch file?

Tarui-san, could you explain a bit the technique?
I am not sure to understand, it seems vm_getinstancevariable already has some inline cache.
Is it some manual inlining in the instruction code + avoiding some ID2SYM/INT2FIX (but these two seem performed at compile time, so mostly irrelevant for the benchmark)?

#3 - 04/13/2016 01:13 AM - tarui (Masaya Tarui)
there are 2 parts of optimization.

- share inline cache between same symbol(at compile.c)
-inline fast pass only and cut useless check(RB_TYPE_P).(at insns.def)

We can skip st_lookup from the 2nd insns by sharing cache.

Inlining register pass may have a bit penalty.
Cutting check was a accidental :-), but it is not necessary if cached serial equals class one.

#4 - 04/13/2016 01:32 AM - tarui (Masaya Tarui)

eregontp@gmail.com:

Issue #12274 has been updated by Benoit Daloze.

avoiding some ID2SYM/INT2FIX (but these two seem performed at compile time, so mostly irrelevant for the benchmark)?

It is not for avoiding ID2SYM (In fact, it is calculated every time :-), it is for sharing.
Please check the 0007 below

```
$ ./ruby -v --disable-gems --dump=insns -e"@a=1;p @a"
ruby 2.4.0dev (2016-04-12 trunk 54553) [x86_64-linux]

Inlining register pass may have a bit penalty.

Cutting check was a accidental :-), but it is not necessary if cached serial equals class one.

I see, thanks for explaining :)

About the object check, is it not problematic to do ((struct RBasic*)obj)->klass if obj is a tagged integer (since klass is the second member, after flags)?

Or is there a hidden check before doing that?

#7 - 04/13/2016 12:55 PM - tarui (Masaya Tarui)

About the object check, is it not problematic to do ((struct RBasic*)obj)->klass if obj is a tagged integer (since klass is the second member, after flags)?

Thank you for pointing out.
I'll revive check.

#8 - 05/11/2016 12:50 PM - tarui (Masaya Tarui)

- Status changed from Open to Closed

Applied in changeset r54976.

- compile.c (iseq_compile_each): share InlineCache during same instance variable accesses. Reducing memory consumption, raising cache hit rate and raising branch prediction hit rate are expected. A part of [Bug #12274].
  - iseq.h (struct iseq_compile_data): introduce instance variable IC table for sharing.
  - iseq.c (prepare_iseq_build, compile_data_free): construct/destruct above table.
