Bug #12274
accessing to instance variable should be fast.

04/12/2016 03:50 PM - tarui (Masaya Tarui)

Status: Closed
Priority: Normal
Assignee:
Target version:
ruby -v: ruby 2.4.0dev (2016-04-12 trunk 54553) [x86_64-linux]
Backport: 2.1: UNKNOWN, 2.2: UNKNOWN, 2.3: UNKNOWN

Description
Currently, accessing to instance variable is quite slower than accessing to local variable. I think accessing to instance variable is basic operation and it should be fast, so tried to improve.

patch: https://github.com/tarui/ruby/commit/dd993da80c7ad84340689137bf8b308793595cae

On mame's optcarrot benchmark, (https://github.com/mame/optcarrot/) it is 10%(!) faster than trunk.
It increases in the maintenance cost a little, but can I commit it?

$ ./ruby --disable-gems ../../../optcarrot/bin/optcarrot --benchmark ../../../optcarrot/examples/Lan_Master.nes
ruby 2.4.0dev (2016-04-12 trunk 54553) [x86_64-linux]
fps: 13.664029283085743
checksum: 59662

Tarui-san suggested another way to optimize and this is my version of that technique (with some refactoring).

The diff is hard to read, would you have a commit on GitHub or a patch file?

Tarui-san, could you explain a bit the technique?
I am not sure to understand, it seems vm_getinstancevariable already has some inline cache.
Is it some manual inlining in the instruction code + avoiding some ID2SYM/INT2FIX (but these two seem performed at compile time, so mostly irrelevant for the benchmark)?

there are 2 parts of optimization.

- share inline cache between same symbol(at compile.c)
- inline fast pass only and cut useless check(RB_TYPE_P).(at insns.def)

We can skip st_lookup from the 2nd insns by sharing cache.

Inlining register pass may have a bit penalty.
Cutting check was a accidental :-), but it is not necessary if cached serial equals class one.

It is not for avoiding ID2SYM (In fact, it is calculated every time :-), it is for sharing.
Please check the 0007 below

```
$ ./ruby -v --disable-gems --dump=insns -e"@a=1;p @a"
ruby 2.4.0dev (2016-04-12 trunk 54553) [x86_64-linux]
== disasm: #<ISeq:<main>@-e>============================================
0000  trace 1         ( 1)
0002  putobject_OP_INT2FIX_O_1_C_
0003  setinstancevariable :@a, <is:0>
0006  putself
0007  getinstancevariable :@a, <is:0>
0010  opt_send_without_block <callinfo!mid:p, argc:1, FCALL|ARGS_SIMPLE>, <callcache>
0013  leave
```

```
$ ./ruby -v --disable-gems --dump=insns -e"@a=1;p @a"

2016-04-13 5:41 GMT+09:00 eregontp@gmail.com:

Issue #12274 has been updated by Benoit Daloze.

avoiding some ID2SYM/INT2FIX (but these two seem performed at compile time, so mostly irrelevant for the benchmark)?
there are 2 parts of optimization.

- share inline cache between same symbol (at compile.c)
- inline fast pass only and cut useless check (RB_TYPE_P) (at insns.def)

We can skip st_lookup from the 2nd insns by sharing cache.

Inlining register pass may have a bit penalty.

Cutting check was a accidental :-), but it is not necessary if cached serial equals class one.

I see, thanks for explaining :)

About the object check, is it not problematic to do ((struct RBasic*)obj)->klass if obj is a tagged integer (since klass is the second member, after flags)?

Or is there a hidden check before doing that?

About the object check, is it not problematic to do ((struct RBasic*)obj)->klass if obj is a tagged integer (since klass is the second member, after flags)?

Thank you for pointing out.
I'll revive check.

Applied in changeset r54976.
