Since r52050 ("proc.c: enable optimization of Proc#call") for [Feature #11569], we need to maintain this documentation in a way RDoc comprehends. This is probably not worth fixing in RDoc itself since this uses a non-standard internal C API, which is subject to change without notice.

I will commit in a week unless there's a better idea to fix the doc than this patch. This affects 2.3+, so a backport there is needed.
