

Ruby trunk - Feature #12523

`Object#values_at`

06/27/2016 02:59 PM - sawa (Tsuyoshi Sawada)

Status: Open	
Priority: Normal	
Assignee:	
Target version:	
Description It might be convenient to have a method that returns multiple attributes of an object. <pre>class A attr_accessors :foo, :bar, :baz def initialize foo, bar, baz; @foo, @bar, @baz = foo, bar, baz end end A.new("a", "b", "c") A.values_at(:baz, :foo) # => ["c", "a"]</pre>

It might be convenient to have a method that returns multiple attributes of an object.

```
class A
  attr_accessors :foo, :bar, :baz

  def initialize foo, bar, baz; @foo, @bar, @baz = foo, bar, baz end
end

a = A.new("a", "b", "c")
a.values_at(:baz, :foo) # => ["c", "a"]
```

I'm not that strongly against it, but wonder if it has actual usage where it is convenient. Do you have any use cases?
