

Ruby master - Bug #12615

Pathname#rename does not work across filesystem boundaries.

07/23/2016 01:30 AM - singpolyma (Stephen Paul Weber)

Status: Closed	
Priority: Normal	
Assignee: akr (Akira Tanaka)	
Target version:	
ruby -v:	Backport: 2.1: UNKNOWN, 2.2: UNKNOWN, 2.3: UNKNOWN
Description So I must continue to use FileUtils.mv -- either Pathname#rename should be fixed or (if the current behaviour is desired) and Pathname#mv added.

I do not think this is a bug. Pathname#rename operates exactly like File.rename, which like rename(2), require that the source and destination be on the same file system.

FileUtils.mv tries to use File.rename, and if it fails due to Errno::EXDEV, then it copies the file manually. If you would like Pathname#mv added, please submit a feature request for that.
