Description
If I run rails console it displays many lines of code and then states:

[NOTE]
You may have encountered a bug in the Ruby interpreter or extension libraries. Bug reports are welcome.
For details: http://www.ruby-lang.org/bugreport.html

If I specify development it will show me the console has started. But upon issuing any command for instance user = User.new it will revert back to the original error. I'm running mac sierra

$ bin/rails console development
Running via Spring preloader in process 30451
Loading development environment (Rails 5.0.0.1)
irb(main):001:0>

We need the "many lines of code" you omit to say who is wrong.
