

Ruby trunk - Bug #13046

make -j fails when --enable-install-capi is specified to configure

12/17/2016 01:40 PM - swills (Steve Wills)

Status: Closed	
Priority: Normal	
Assignee:	
Target version:	
ruby -v:	Backport: 2.1: UNKNOWN, 2.2: UNKNOWN, 2.3: UNKNOWN
Description When ruby is configured with the --enable-install-capi flag, the build will fail if make -j is used because the build tries to generate docs for objects that don't exist yet.	

History

Sorry, false alarm. This used to happen, but seems not to any more.

#2 - 12/19/2016 01:20 AM - shyouhei (Shyouhei Urabe)

- Status changed from Open to Closed

I see. Closing for now. Tell us when you see this again.
