Ruby master - Bug #13127

DRb `load`: connection closed (DRb::DRbConnError) when client exit's from within a loop iterating over remote objects

01/13/2017 06:04 PM - mkanoor@redhat.com (Madhu Kanoor)

Description
Calling exit from a DRb client inside a do block while iterating over remote objects causes a DRb connection closed error. This error doesn't happen when working with local objects.

To recreate the problem
start the drb server using `ruby drb_server_test.rb`
run the client `ruby drb_client_test.rb`
The client code fails with a stack trace

The Kernel.exit! works.
But why does the problem happen with the exit called? Isn't that a bug.
