Ruby master - Bug #14695

[2.5.1] `===` is 1.77x slower than `match?`

04/18/2018 07:30 AM - baweaver (Brandon Weaver)

Status: Closed
Priority: Normal
Assignee: 
Target version: ruby -v:
Backport:

Description
Was evaluating some of the `===` implementations while testing and came across this one:

```ruby
# ruby 2.5.1p57 (2018-03-29 revision 63029) [x86_64-darwin17]
require 'benchmark/ips'
def run_benchmark(title, **benchmarks)
  puts '', title, '=' * title.size, ''
  # Validation
  benchmarks.each do |benchmark_name, benchmark_fn|
    puts "#{benchmark_name} result: #{benchmark_fn.call()}"
  end
  puts
  benchmarks.ips do |bm|
    benchmarks.each do |benchmark_name, benchmark_fn|
      bm.report(benchmark_name, &benchmark_fn)
    end
    bm.compare!
  end
end
regex = /foo/
# => /foo/
string = 'foobarbaz'
# => "foobarbaz"
run_benchmark('=== vs match? - 2.5.1',
  '===': -> { regex === string },
  'match?:': -> { regex.match? string })
=== vs match? - 2.5.1
---------------------
=== result: true
match? result: true

Warming up -------------------------------
  === 173.435k i/100ms
  match? 233.124k i/100ms

Calculating -------------------------------
  === 3.174M (± 1.6%) i/s - 15.956M in 5.029027s
  match? 5.626M (± 2.5%) i/s - 28.208M in 5.016991s

Comparison:
  match?: 5626170.1 i/s
  ===: 3173659.6 i/s - 1.77x slower
```
It appears that === is running a bit slower than match?, though there may be some concerns around old code potentially relying on regex set globals after === too in case statements, so not sure there.

Accurate observation. Regexp#match? was introduced as a "faster alternative" to ordinary matches; see also [https://bugs.ruby-lang.org/issues/8110](https://bugs.ruby-lang.org/issues/8110)
