Ruby master - Bug #14747

uninitialized constant Gem::PathSupport

05/10/2018 10:36 AM - duerst (Martin Dürst)

**Description**

I'm getting the following error repeatedly:

```
/cygdrive/c/Data/ruby/lib/rubygems.rb:393:in `paths': uninitialized constant Gem::PathSupport (NameError)
```

I have set --with-baseruby=/usr/bin/ruby, which is an old version of ruby, and started from ./configure, but that doesn't help.

The command I use to compile is

```
make up unicode-up install-nodoc runnable
```

The source is at the newest revision, r63393.

**History**

**#1 - 05/10/2018 12:53 PM - hsbt (Hiroshi SHIBATA)**

It caused by broken csv-1.0.2.gemspec. Can you try to clean installation directory and re-install trunk version?

**#2 - 05/10/2018 12:53 PM - hsbt (Hiroshi SHIBATA)**

- Status changed from Open to Assigned

**#3 - 05/11/2018 11:00 AM - duerst (Martin Dürst)**

hsbt (Hiroshi SHIBATA) wrote:

I caused by broken csv-1.0.3.gemspec. Can you try to clean installation directory and re-install trunk version?
```

I tried. I completely removed the checkout, and checked everything out from svn again, then starting with autoconf and ./configure. I still get the same error.

**#4 - 05/11/2018 02:20 PM - hsbt (Hiroshi SHIBATA)**

- Status changed from Assigned to Feedback

I fixed this problem at r63377. I think that this is your environment problem.

Did you clean-up with /cygdrive/c/Data/ruby ?

**#5 - 05/14/2018 08:43 AM - duerst (Martin Dürst)**

Sorry to be late with my reply

```

Yes I did. I completely removed this directory, and made a full new checkout. As far as I understand from the details of the error messages (see
below), during building, the downloaded local copies of gems are used. That would mean that the environment would not have any effect. But of course, there might be other ways that the environment can influence the result.

Also, r63377 is about the csv gem, but the error appears to be unrelated to the csv gem (as far as I can see). Again, I might be wrong here, too.

Anyway, this is a larger part of the error message:

```
making trans
make[1]: Entering directory '/cygdrive/c/Data/ruby'
make[1]: Nothing to be done for './enc/trans'.
make[1]: Leaving directory '/cygdrive/c/Data/ruby'
making encs
make[1]: Entering directory '/cygdrive/c/Data/ruby'
make[1]: Nothing to be done for 'encc'.
make[1]: Leaving directory '/cygdrive/c/Data/ruby'
blding rb_mjit_header.h
rb_mjit_header.h updated
building .ext/include/x86_64-cygwin/rb_mjit_min_header-2.6.0.h
./miniruby.exe -I./lib -I.-I.ext/common ./tool/transform_mjit_header.rb "gcc " rb_mjit_header.h .ext/include
x86_64-cygwin/rb_mjit_min_header-2.6.0.h
```

Transforming external functions to static:
```
transform_mjit_header: making external definition of 'rb_vm_pop_cfunc_frame' static inline
```

(many more similar messages)
```
transform_mjit_header: making declaration of 'rb_error_arity' static inline
```

/cygdrive/c/Data/ruby/lib/rubygems.rb:393:in `paths': uninitialized constant Gem::PathSupport (NameError)
```
rm cygruby260.rc

duerst@Arnisee ~/cygdrive/c/Data/ruby
```

What is especially intriguing to me is that ./miniruby.exe is called with `--disable-gems`, but then there is a gem-related error.

#6 - 05/21/2018 11:32 AM - duerst (Martin Dürst)

- Status changed from Feedback to Assigned

I have been able to 'solve' this problem by adding
```
require 'rubygems/path-support'
```

at the start (around line 23) of lib/rubygems.rb.

I can commit this, or feed it back upstream (or just keep it for myself, if I'm the only one having this problem).

Hey this is my patch. ;-) I did the same and it worked for me. But for the actual trunk it seems not longer to be necessary?

I removed my/your 'patch' (see https://bugs.ruby-lang.org/issues/14747#note-6), and the compilation continued to work. So I'll close this issue.

So this seems to be a transient issue, but it doesn't go away by removing everything and checking out all of the source from scratch. I don't know why, but anyway, we have a solution.

No, this was long ago, and hasn't resurfaced. Closing.
