Ruby loses readline standard library when the system doesn't have libreadline during Ruby installation, At
https://bugs.ruby-lang.org/issues/11084, hsbt (Hiroshi SHIBATA) proposed pure Ruby implementation. But I think that rb-readline is
not good for Ruby standard library and I described it at http://blade.nagaokaut.ac.jp/cgi-bin/scat.rb/ruby/ruby-core/86213. The
important reason for it personally is that rb-readline doesn't have vi mode.

So I'm implementing Reline for a new standard library as GNU Readline and existing ext/readline compatible. I can maintain it.
https://github.com/aycabta/reline

I don't think that Reline should replace ext/readline fully, it's just for fallback. But it's important for Ruby.

Reline does not seem to support bracketed paste mode:

11/07/2021
$ ruby -v
ruby 2.7.0p0 (2019-12-25 revision 647ee6f091) [x86_64-darwin18]

$ # has 2 lines of input
  pbpaste
  "abc"
  .upcase

$ # readline respects bracketed paste mode, reads in both lines
    ruby -r readline -e 'p Readline.readline "> "'
    > "abc"
    .upcase
    "\"abc\"\n.upcase"

$ # reline does not support bracketed paste mode, reads them in as 2 separate lines
    ruby -r reline -e '2.times { p Reline.readline "> " }'
    > "abc"
    "\"abc\""
    > .upcase
    ".upcase"

$ cat ~/.inputrc | sed '/^$/q'
set enable-bracketed-paste on
set blink-matching-paren on
set colored-completion-prefix on
set colored-stats on
set keyseq-timeout 250
set show-all-if-ambiguous on
set visible-stats on

I also checked one of the other config options (blink-matching-paren) and it blinks with readline, but not reline. Makes me wonder if it isn't reading the
~/.inputrc file (it may be Mac specific).

Reporting it here as the Github project doesn't seem to have an issues section.
