

Ruby master - Bug #15433

OpenStruct NameError vs NoMethodError spec fails for method_missing

12/18/2018 06:25 PM - normalperson (Eric Wong)

Status: Open	
Priority: Normal	
Assignee:	
Target version:	
ruby -v:	Backport: 2.4: UNKNOWN, 2.5: UNKNOWN
Description	
<p>I've hit this with parallel tests on a bare trunk on all my Debian stable machines, not sure why, yet:</p> <pre>1) OpenStruct#method_missing when passed additional arguments raises a NoMethodError ERROR NameError: undefined local variable or method `test' for #<OpenStruct> \$srcdir/lib/ostruct.rb:213:in `method_missing' \$srcdir/spec/ruby/library/openstruct/method_missing_spec.rb:37:in `block (3 levels) in <top (required)>' \$srcdir/spec/ruby/library/openstruct/method_missing_spec.rb:37:in `block (2 levels) in <top (required)>' \$srcdir/spec/ruby/library/openstruct/method_missing_spec.rb:34:in `<top (required)>'></pre>
