**Ruby master - Feature #16255**

**Make `monitor.rb` built-in**

10/15/2019 09:21 PM - ko1 (Koichi Sasada)

**Description**

**Abstract**

`monitor.rb` introduces `MonitorMixin` module and `Monitor` class. Now, `rubygems.rb` requires `monitor.rb` so that most of Ruby applications (*1) requires `monitor.rb`

[*1] running MRI with --disable-gems can eliminate `monitor.rb`, but only a few people use this option.

Also recent changes (6ec1720aa38772ba4b7515790443cb578340518b and so on) to make it atomic introduces several overhead. Making them in C will avoid such overhead.

Naruse-san made `monitor-ext` gem to make it faster by making C-extension. This proposal is to make it built-in class.

**Approach**

Implement `Monitor` class as re-entrant mutex object in C and implement `MonitorMixin` with it. Now, `Monitor` class is implemented with `MonitorMixin`, but it is easy to implement `Monitor` class directly and faster in C.

`MonitorMixin` and `MonitorMixin::ConditionalVariable` are remained in `lib/monitor.rb`, because it is easy to write :p

**Implementation**

https://github.com/ruby/ruby/compare/master...ko1:thread_monitor

**Evaluation**

```ruby
require_relative 'benchmark/lib/load'
Benchmark.driver(repeat_count: 1){|x|
  x.executable name: '2.5.2', command: %w'/home/ko1/ruby/install/ruby_2_5/bin/ruby'
  x.executable name: '2.6.6', command: %w'/home/ko1/ruby/install/ruby_2_6/bin/ruby'
  x.executable name: 'trunk', command: %w'/home/ko1/ruby/install/trunk/bin/ruby'

  x.prelude {%mon = Monitor.new

  x.report {%mon.synchronize{
    mon.synchronize{
  }
  }
}

#=>
# trunk:  4345545.8 i/s
# 2.5.2: 1657762.1 i/s - 2.62x slower
# 2.6.6:  499165.7 i/s - 8.71x slower
```

**Discussion**
Queue, Mutex are the alias of Thread::Queue, Thread::Mutex.

p Queue #=> Thread::Queue

I defined Thread::Monitor and make alias by Monitor = Thread::Monitor. Is it okay?

I removed mon_ prefix methods from Monitor class. I believe they are only for MonitorMixin.

... but I found two examples which call mon_ prefix methods for Monitor class:

/home/gem-codesearch/gem-codesearch/latest-gem/gel-0.3.0/lib/gel/db.rb: @monitor.mon_owned?
/home/gem-codesearch/gem-codesearch/latest-gem/keepyourhead-0.2.2/lib/Keepyourhead/Cache.rb: @monitor.mon_synchronize {

Should we obsolete them for Monitor class?

Associated revisions
Revision caac5f77 - 10/19/2019 07:52 PM - ko1 (Koichi Sasada)
make monitor.so for performance. (#2576)

Recent monitor.rb has performance problem because of interrupt handlers. 'Monitor#synchronize' is frequently used primitive so the performance of this method is important.

This patch rewrite 'monitor.rb' with 'monitor.so' (C-extension) and make it faster. See [Feature #16255] for details.

Monitor class objects are normal object which include MonitorMixin. This patch introduce a Monitor class which is implemented on C and MonitorMixin uses Monitor object as re-entrant (recursive) Mutex. This technique improve performance because we don't need to care atomicity and we don't need accesses to instance variables any more on Monitor class.

#3 - 12/01/2019 05:20 AM - y-yagi (Yuji Yaginuma)
This change breaks the library that extends Monitor class. For example, Rails has such class and it breaks in Ruby 2.7.
https://github.com/rails/rails/blob/461aae05f1194f775a6367b99add4dda37746bd5c/activesupport/lib/active_support/concurrency/load_interlock_aware_monitor.rb#L7-L15

Isn't it guaranteed to make such extending to Monitor?
(I'm not sure if Monitor class is a public API or not)
The latest google-cloud-pubsub breaks too because new_cond comes before initialization:
https://github.com/googleapis/google-cloud-ruby/blob/google-cloud-pubsub/v1.1.2/google-cloud-pubsub/lib/google/cloud/pubsub/async_publisher.rb#L92-L95

Could you share the error and backtrace in both of these cases?

The latest google-cloud-pubsub breaks too because new_cond comes before initialization:

Rails encountered the same issue (related to https://github.com/rails/rails/pull/37822).
The error and backtrace of in this case are as follows.
https://buildkite.com/rails/rails/builds/65193#02e136eb-edea-4367-aee0-77e0a82f8531/990-1200

In the first case, the method did not call as expected, so it does not show error and backtrace that related to the issue.

I fixed new_cond before mon_initialize problem c6e3db0c66312af1e932c21006437419efa9ac75
https://github.com/rails/rails/blob/461aae05f194f775e6367be9add4dada37746bdfb5c/activesupport/lib/active_support/concurrency/load_interlock_aware_monitor.rb#L7-L15

This code depends "how to implement #synchronize" so that I'm not sure MRI should support it for compatibility (I don't think so, if most of people doesn't use this technique).

Thanks for your response! I understood the support policy.
