Description
Currently, Time.at and Time.now accept a timezone as a keyword argument, but not Time.new. This means minor arguments cannot be omitted for Time.new.

```
Time.new(2021, 1, 1, 0, 0, 0, "+09:00") #=> ok: 2021-01-01 00:00:00 +0900
Time.new(2021, 1, "+09:00") #=> bad: 2021-01-01 09:00:00 +0900
Time.new(2021, 1, 1, in: "+09:00") #=> ok: 2021-01-01 00:00:00 +0900
```

Suggest that Time.new should also accept the in: timezone option.

```
Time.new(2021, 1, 1, in: "+09:00") #=> ok: 2021-01-01 00:00:00 +0900
Time.new(2021, in: "+09:00") #=> ok: 2021-01-01 00:00:00 +0900
```

I think Time.new(2021, 1, 1, "+09:99") should raise an error instead of 2021-01-01 09:00:00 +0900.
