Ruby master - Feature #18124
Hash shorthands (matching constructors functionality in JS)
08/20/2021 06:04 PM - myxoh (Nicolas Klein)

Description

Suggestion:
To implement one shorthand operators that allows you to construct hash into local variables and construct local variables into a hash.

Context:
Javascript and other languages have a similar feature. It's helpful, and I don't think there's anything stopping Ruby for supporting it.
Ruby also supports destructuring from an array.

Syntax:

Constructor:
The constructor shorthand would allow you to create a hash where the symbol key has the same name as the variable.

For example:

```ruby
local_number = 1
user = OStruct.new(name: 'john')
hash = %{ local_var user }
```

would be equivalent to:

```ruby
local_number = 1
user = OStruct.new(name: 'john')
hash = { local_number: local_number, user: user }
```

The new syntax is based on ruby's existing literal constructors syntax.

EDIT:
Edited to remove a reference to the destructuring, which is already implemented on Ruby 3

For "Destructuring", you can use one-line pattern matching since Ruby 3.0:

```ruby
hash = {a: 'a', b: 'b'}
hash => { a: 'a', b: 'b' }
p hash[:a] #=> "a"
```
For "Constructor", it is a long-running topic: #14579, #17292, and maybe other tickets I cannot remember. But as far as I recall, no one proposed this particular syntax %C{ }.

#4 - 08/20/2021 06:41 PM - myxoh (Nicolas Klein)
- Description updated
- Subject changed from Hash shorthands (matching constructors and destructuring functionality in JS) to Hash shorthands (matching constructors functionality in JS)

Thank you, haven't had enough of a chance to play with Ruby 3. Clearly I missed things. I've updated to remove the reference to the destructuring. I've also made a slight update to make it more consistent with ruby's existing % literal constructors (as that's the intent here)

I think it's similar to this.

Yes, fair find! If google translate is translating correctly it seems the exact same specification.
Sorry, should have done a better job searching for it!

Should I close this issue then?
