## Description

I've got a new machine. I've been trying to run a React Native app and have had a lot of troubles. Going through the myriad of issues and applying various fixes, I got to a point where I wondered if React Native was even installed, as a CLI tool. So I globally installed it via npm. But now when I run pod install, I get a ruby error? I'm pasting the crash report. Maybe someone has an idea of what I can do:

```bash
A6004902@MACP2GKXYDW6J ios % pod install --verbose
$ /Users/A6004902/.nvm/versions/node/v16.13.2/bin/node -e try {console.log(require('@react-native-community/cli').bin);} catch (e) {console.log(require('react-native/cli').bin);} /Users/A6004902/repos/fwf-employee-app/node_modules/@react-native-community/cli/build/bin.js
Using firebase.json from '/Users/A6004902/repos/fwf-employee-app/firebase.json'
Adding a custom script phase for Pod RNFBApp: [RNFB] Core Configuration
