Ruby master - Feature #2643

test/unit redefinition check of test_* method

01/25/2010 07:41 PM - mame (Yusuke Endoh)

Status: Closed
Priority: Normal
Assignee: sorah (Sorah Fukumori)
Target version: 2.0.0

Description

=begin
Hi, Ryan Davis --

When writing test cases with test/unit, we often by mistake define a test function whose name is already used:

class TestFoo < Test::Unit::TestCase
def test_some_test  # not executed
...
end

... 

def test_some_test  # redefined 
...
end

def

This leads to a loss of a valuable chance of test. It is good for test/unit to detect and warn such a redefinition.

A patch is attached. Could you merge the patch into test/unit? I'm less than picky about the implementation detail and error message.

By the attached patch, I actually found eight redefinitions in tests of ruby core :-)

* TestUTF16#test_casecmp
  - defined by akr, redefined by akr

* TestHash#test_key?
  - defined by ko1, redefined by ko1

* TestHash#test_value?
  - defined by ko1, redefined by ko1

* TestProc#test_proc_args_opt_and_block
  - defined by yugui, redefined by yugui

* TestEncodingConverter#test_invalid_replace
  - defined by akr, redefined by akr
• TestZlibGzipReader#test_gets
  - defined first by mame, redefined by mame

• TestBigDecimal#test_coerce
  - defined first by mame, redefined by nobu

• TestStringScanner#test_inspect
  - defined first by aamine, redefined by mame

• test/testunit/test4test_redefinition.rb: Ditto.
Test leads to a loss of a valuable chance of test. It is good for test/unit to detect and warn such a redefinition.

I think you can already see them with warning enabled:

(in Ruby 1.9.2)

```
test.rb:163: warning: method redefined; discarding old test_one
test.rb:160: warning: previous definition of test_one was here
```

(in 1.8.7)

```
test.rb:163: warning: method redefined; discarding old test_one
```

B.D.

This leads to a loss of a valuable chance of test. It is good for test/unit to detect and warn such a redefinition.

I think you can already see them with warning enabled:
(in Ruby 1.9.2)
test.rb:163: warning: method redefined; discarding old test_one
test.rb:160: warning: previous definition of test_one was here
(in 1.8.7)
test.rb:163: warning: method redefined; discarding old test_one

The warning is very forgetful. It is waste of time and intelligence for all test/unit users to enable the warning. In addition, method redefinition is not always wrong.

But, it is reasonable to enable all warning during test. If so, it is also good for test/unit to enable warning by default, I think.

I agree with Benoit. -w is there for a reason. If you're willing to ignore warnings coming from ruby, why would adding another line that says essentially the same thing be any better?

Regardless, I don't maintain test/unit, but I vote that this ticket be rejected.

Shota, please handle this. We also added you as a maintainer of test/unit. http://bugs.ruby-lang.org/projects/ruby/wiki/Maintainers
