

## Ruby trunk - Feature #4224

### inconsistent behavior of 'puts "\xFF"'

"Current spec" seems:
```

- if external encoding is set, output may raise exception
- if not set, output won't raise exception

Because this case is latter even if ruby converts strings internally, it shouldn't raise exception.

Anyway in this case specifically, \xFF should be converted to U+F8F7.

So *this* is conversion table's bug.

After further thought, current conversion table is correct.  
And your patch is the correct way.
