

Ruby 1.8 - Bug #4497

REXML Pretty formater does use specified 'width' to wrap lines

03/13/2011 04:47 AM - mfrasca (Michael Frasca)

Status:	Open
Priority:	Normal
Assignee:	
Target version:	Ruby 1.8.7
ruby -v:	ruby 1.8.7 (2011-02-18 patchlevel 334) [i386-mingw32]
Description	
<pre>=begin REXML::Formatters::Pretty has 'width' attribute used to wrap lines. This is not used when the wrap method is invoked # pretty.rb - line 86 def write_text(node, output) s = node.to_s() s.gsub!(/s/, ' ') s.squeeze!(" ") s = wrap(s, 80-@level) ## HERE - 80 is hard coded, value should depend on @width and @level (e.g. @width - @level) s = indent_text(s, @level, " ", true) output << ("**@level + s) end =end</pre>	

History

- File *ruby-core-bug-4497.patch* added

```
=begin
Patch attached for 'lib/rexml/formatters/pretty.rb'. @width attribute is used to compute line width when wrapping text output. @level is subtracted from @width to account for indenting of current xml node.
```
