ruby -v:	ruby 1.8.7 (2011-06-30 patchlevel 352) [i386-linux]

Description

Estoy intentando correr un archivo ".rb" y me sale el siguiente error.

```
[XXXXXX@localhost caos]$ ruby caos.rb
/usr/lib/ruby/site_ruby/1.8/i386-linux/gtkmozembed.so: [BUG] Segmentation fault
ruby 1.8.7 (2011-06-30 patchlevel 352) [i386-linux]
```

Abortado ('core' generado)

utilizo el sistema operativo fedora 15 gnome-shell 3 y estoy haciendo el tutorial de rubyzilla que esta en el sitio web <http://ruby-gnome2.sourceforge.jp/hiki.cgi?RubyZilla> cuando llego al paso de ejecutar el archivo "\$ ruby caos.rb" me sale el error antes mencionado.

Hi Jesus, although I can understand Spanish, I don't think you'll get much helper here if you don't write your issues in English or Japanese...

Anyway, your problem seems to be related to GtkMozEmbed, so you should file an issue there rather than here:

<http://www-archive.mozilla.org/unix/gtk-embedding.html>

But I would start reporting it in Ruby-Gnome2. If they think it's a problem with GtkMozEmbed, they'll redirect you to there. If GtkMozEmbed thinks it's a problem with Ruby itself, they'll fill an issue here, but I guess chances of this happening are minimal.

Good journey on learning Ruby. Enjoy it! :)
