Hello,

I am using ruby 1.9.3p194 (2012-04-20 revision 35410) [x86_64-linux].

There is no way to deactivate a Hash's compare by identity behavior:

```ruby
h = Hash.new
h.compare_by_identity #=> true
h.compare_by_identity? #=> true
h.compare_by_identity
h.compare_by_identity? #=> still true
```

I want the ability to deactivate that behavior afterwards, like this:

```ruby
h.compare_by_identity = false
```

Thanks for your consideration.

---

Yusuke Endoh mame@tsg.ne.jp
h.compare_by_identity = false

What value is returned for ((h['a']))?
=end

Good point. This feature would violate the invariant of hash keys being unique. You may reject this feature request. Thanks.
