Test on my machine with chcp 437. sh-3.1\$./miniruby -e 'ENV["a"] = "\xA4\xDB\xA4\xB2\xA4\xDB\xA4\xB2"; p ENV["a"]' "\xEF\xBD\xA4\xEF\xBE\x9B\xEF\xBD\xA4\xEF\xBD\xB2\xEF\xBD\xA4\xEF\xBE\x9B\xEF\xBD\xA4\xEF\xBD\xB2" This spec seems to be changed by #5570 (r35030). If I changed ENV not to use UTF-8 conversion like the following patch, the test didn't fail. https://gist.github.com/3859711#file_fix_env_encoding_patch But the patch would break #5570 fix since the filesystem encoding is forced upon environment variables. So far I don't know fixes to pass the test and support #5570. Are there any good ways? I would suggest to skip the test if locale encoding is not proper on Windows. Here is a patch. https://gist.github.com/3869593 =end</pre> | |

I can't make the decision to change the encoding of ENV now.
In future version -- 3.0? -- we will be able to change it.

So, we should make a work around by changing test.
Please commit it.

Is that means changing the encoding of ENV will solve the following inconsistency between input and output?

```
sh-3.1$ ./miniruby -e 'ENV["a"] = "\xA4\xDB\xA4\xB2\xA4\xDB\xA4\xB2"; p ENV["a"]'
"\xEF\xBD\xA4\xEF\xBE\x9B\xEF\xBD\xA4\xEF\xBD\xB2\xEF\xBD\xA4\xEF\xBE\x9B\xEF\xBD\xA4\xEF\xBD\xB2"
```

Thanks. I'll commit it later.
