

## Ruby master - Feature #7614

### alias\_accessor

12/24/2012 11:19 AM - trans (Thomas Sawyer)

<b>Status:</b>	Open
<b>Priority:</b>	Normal
<b>Assignee:</b>	matz (Yukihiro Matsumoto)
<b>Target version:</b>	
<b>Description</b>	
<p>=begin Prior issue reminded me that I've been meaning to ask for this for a while, as I use is fairly often.</p> <p>In pure Ruby the definition is essentially:</p> <pre>def alias_accessor(name, origin)   alias_method "#{name}=", "#{origin}="   alias_method name, origin end</pre> <p>Albeit pursuit to prior mentioned issue, I'd define it more like:</p> <pre>def alias_accessor(name, origin)   writer_name = name.to_s.chomp('?')   alias_method "#{writer_name}=", "#{origin}="   alias_method name, origin end</pre> <p>=end</p>
