

## Ruby master - Bug #8877

### OptionParser::Version should not rely on SVN

09/08/2013 12:26 PM - hasari (Hiro Asari)

<b>Status:</b> Closed	
<b>Priority:</b> Normal	
<b>Assignee:</b>	
<b>Target version:</b>	
<b>ruby -v:</b> ruby 2.1.0dev (2013-08-02 trunk 42320) [x86_64-darwin12.4.0]	<b>Backport:</b> 1.9.3: UNKNOWN, 2.0.0: UNKNOWN
<b>Description</b> =begin Currently, (OptionParser::Version) is (()) by:  RCSID = %w\$Id\$[1..-1].each { s  s.freeze}.freeze Version = (RCSID[1].split('.').collect { s  s.to_i}.extend(Comparable).freeze if RCSID[1])  This assumes that before this file is invoked, something preprocesses this file and rewrites ({\$Id\$}). This is not the case with (git).  As a result, if you build from the git clone, you'd get  irb(main):001:0> RUBY_DESCRIPTION => "ruby 2.1.0dev (2013-08-02 trunk 42320) [x86_64-darwin12.4.0]" irb(main):002:0> require 'optparse' => true irb(main):003:0> OptionParser::Version => nil  While I understand the history of the development process and Ruby core's professed affinity for SVN, but this strikes me as a very bad idea.  =end
