

CommonRuby - Feature #8947

make alias, alias_method, attr_* return name of the alias

Description	
<p>Now that def returns the method name, it would be handy to have alias/alias_method return the name of the alias:</p>	
<pre>class Foo private def foo() end protected alias_method :bar, :foo end</pre>	
<p>Same goes for the attr_* methods:</p>	
<pre>class Foo private attr_accessor :foo, :bar end</pre>	
<p>What do you think?</p>
