

## Ruby master - Feature #9887

### Add uninclude please

<b>Description</b>		
Hi!		
I would like to have a way to cleanly uninclude a module.		
Consider:		
<pre>module Foo   TEST = '123' end class Bar   include Foo end</pre>		
Now I would like to uninclude Foo. I can remove constants and methods already, i.e. via <code>remove_method</code> or <code>undef*</code> and constants can be removed as well but I would like to have something like:		
<pre>class Bar   uninclude Foo end</pre>		
or		
<pre>Bar.uninclude Foo Bar.remove_ancestors Foo</pre>		
Would this be possible? It might be useful but perhaps there is a reason why this can not be added.
